Chapter 1

Introduction

Introducere: obiectivele lucrării și descrierea succintă a capitolelor, prezentarea temei, prezentarea contribuției proprii, respectiv a rezultatelor originale și menționarea (dacă este cazul) a sesiunii de comunicări unde a fost prezentată sau a revistei unde a fost publicată.

Chapter 2

Background

Informatii si citare carte [Som10].

2.1 Methods used

Methods/algorithms used in programming and training chess engines.

2.2 State of the art chess engines

Stockfish, AlphaZero etc. - overview and AI techniques used in them

Chapter 3

Methodology

Description of the approach taken to build the chess engine

Explanation of the AI techniques used and why they were chosen

3.1 Training

Algorithms/techniques used for training the engine

3.1.1 Min-max algorithm

Used to search for best move to a given depth

3.2 Optimizing

Algorithms/techniques used for optimizing the engine

3.2.1 Alpha-Beta pruning

Used to detect and cut off branches that will lead to worse results than the ones already analyzed

Chapter 4

Technologies

Details of the programming languages, libraries, and tools used

4.1 Chess game

Description of tools used in building the chess game - Unity, C#

4.2 Chess engine

Description of tools used in building the chess engine - Python

Chapter 5

Results and evaluation

Description of the testing methodology used

Analysis of the results obtained

Comparison with existing chess engines

Evaluation of the strengths and weaknesses of the chess engine

Chapter 6

Concluzii

Summary of the main findings and contributions of the thesis

Discussion of potential future improvements to the chess engine
